Summary

Highly motivated cybersecurity undergraduate with a passion for network security, ethical hacking, cryptography, and problem-solving. Skilled in penetration testing, intrusion detection, and web exploitation. Strong analytical thinker with a hands-on approach to identifying vulnerabilities and securing digital infrastructures. Enthusiastic about CTFs, threat analysis, and cybersecurity research, with a keen interest in continuously learning and applying cutting-edge security practices. Adept at working with Snort, Wireshark, Nmap, Burp Suite, and Metasploit to fortify system defences. Seeking opportunities to contribute expertise and grow in the cybersecurity field.

Education

Degree	Specialization	Institute	Year	CGPA
B. Tech	Computer Science Engineering	BVRIT	2023 - 2026	7.97 (Till fifth Semester)
Diploma	Computer Engineering	GPWS	2020 - 2023	8.9
SSC	-	Fr. Francis Memorial High School	2019 - 2020	10

Project

Malicious URL Detection Model Using Ensemble Learning

Developed a model to enhance malicious URL detection by integrating Cyber Threat Intelligence (CTI) from Google searches and Whois databases. Used ensemble learning with Random Forest (RF) and Multi-Layer Perceptron (MLP) to improve accuracy by 7.8%. Applied CNN and ensemble methods with N-grams and TF-IDF for real-time detection, reducing false positives.

Voice Assistant Development using Python and Speech Recognition

- Designed and developed a **Voice Assistant** using **Python** and open-source modules like **Speech Recognition**, **pyttsx3**, and **pyjokes** to perform tasks such as fetching time, telling jokes, and searching Wikipedia.
- Integrated **speech-to-text** and **text-to-speech** functionalities to provide a hands-free, interactive experience, enabling real-time voice command recognition and execution.
- Implemented continuous loop functionality to allow the assistant to run seamlessly, improving user interaction and accessibility.
- Enhanced communication by developing conversational responses with natural-sounding speech, improving user experience through **PyCharm Community Edition**.

Internship

Industrial Training at Industech Solutions, HYD

Duration: *June 2022 – Nov 2022*

- Gained hands-on experience in cybersecurity and Android app development, contributing to real-world projects.
- Designed and developed a Python-based voice assistant by analyzing design specifications and utilizing modules like SpeechRecognition, pyttsx3, and pyjokes.

Applied knowledge of voice recognition and text-to-speech to create an intuitive and interactive assistant capable of executing user commands like fetching time, telling jokes, and browsing Wikipedia.

Related Course Work

- CyberSecurity
- Malware Analysis

Technical Skills

- **Languages:** Python, C, C++, Java, Python and SQL
- **CyberSecurity:** Burp suite: Web Application penetration testing, Vulnerability Assessment, Malware Analysis Fundamentals, Metasploit, SQL injection, Cross-site scripting(XSS)

- **CyberSecurity Tools:** Kali Linux, Burp suite, Nmap, Hydra, Nikto, Wireshark, Metasploit, OWASP ZAP, Snort
